

Supply Chain Delivery Performance & Late Shipment Analysis

Problem Statement

A global e-commerce company is experiencing delivery delays across multiple markets and shipping methods. These delays increase operational costs and negatively impact customer experience.

Project Goal

Analyze shipment performance data to identify the major drivers of late deliveries and recommend actions to improve delivery efficiency.

Key Business Questions -

- Which shipping modes generate the most delays?
- Which regions have the worst delivery performance?
- Which product categories experience the highest late-delivery risk?
- How do delays impact profitability?
- What actions can reduce late shipments?

Dataset & Technology Stack

Dataset: DataCo Supply Chain Dataset

Industry: Supply Chain & Logistics

Records Analyzed: 180K+ Orders

Tools Used:

Power BI

Power Query

DAX

Data Modeling

Data Visualization

Objective:

Analyze delivery performance, identify late delivery patterns, evaluate shipping methods, and uncover operational insights for supply chain optimization.
